SUMMARY

MS Computer Science student at UIUC (WashU BS '26) with industry experience shipping Android, iOS, and full-stack web apps, including a clinical research app on Google Play. Seeking Summer 2027 software engineering internships.

EDUCATION

University of Illinois Urbana-Champaign| Champaign, IL **05/2028**
Masters of Computer Science
Washington University in St. Louis | St. Louis, MO **05/2026**
Bachelor of Science, Computer Science

SKILLS

- **Programming Languages:** Python, Java, TypeScript, JavaScript, Kotlin, Swift
- **Frontend:** React, Vue.js
- **Backend & Data:** Flask, Node.js, PostgreSQL, Redis, Kafka, Spark Streaming, Snowflake
- **Cloud & Infrastructure:** AWS Lambda, AWS S3, AWS Cloudfront, Github Actions

PROFESSIONAL EXPERIENCE

ASL Aspire Inc. | St. Louis, MO **06/2026 – 08/2026**
Full Stack Engineering Intern
- Developed a custom assignment creator for teachers in Figma, React and Python end to end.
- Implemented complete video upload pipeline using Flask, Amazon S3 and Cloudfront, with AI assisted and human in the loop moderation.

WashU Medicine NeuroSurgery Department | St. Louis, MO **05/2025 – 08/2026**
Software Engineer
- Led the Android build of an iOS clinical research app's 10 task-module framework in Kotlin.
- Matched iOS sensor output to ~80-90% parity, benchmarked against recorded iOS values, using Kalman and low-pass filters in Kotlin.
- Shipped and maintained the app on Google Play for a 100-patient pilot study.

Papertrail Inc. | St. Louis, MO **06/2024 – 08/2024**
Software Development Intern
- Cut app cold-start time from ~40s to ~20s and fixed user-reported production bugs.
- Set up push notifications on AWS Lambda and S3 for user-history based updates with over 1000 users.

WashU McKelvey Engineering School | St. Louis, MO **08/2023 - 05/2026**
Teaching Assistant
- Mentored 200+ students in React, Swift, and JavaScript courses through office hours and review sessions.
- Graded and provided feedback on 300+ assignments and projects.

PROJECTS

Pokemon Trading Platform | *Distributed Systems Final Project* **01/2026 – 05/2026**
- Built a real-time Pokémon trading platform in React with 12000+ scraped eBay sales listings.
- Engineered a streaming data pipeline using Kafka, Spark Streaming, Redis, and Snowflake to process and store eBay trade listings for analysis.
- Designed a React dashboard with Redis live updates and Snowflake trend analysis.

Inventory Management System | *Warehouse Inventory System* **12/2025 – Present**
- Wrote a warehouse inventory system with a React dashboard, Node.js and PostgreSQL backend, and an iOS barcode scanner app, now piloting at a live clothing business with a 10000+ item inventory.
- Synced mobile scanner and dashboard updates in real time over WebSockets.
- Replaced handheld industrial scanners with an iPhone barcode-scanning app, saving ~$300 per device.

GasLogger | *iOS AI-Powered Fuel Tracking Application* **08/2024 – Present**
- Developed an iOS app that logs fuel purchases and mileage by reading receipt photos with OpenAI vision.
- Hardened prompts and added abuse prevention so receipt information extraction stays reliable on bad input.
